Why It Matters

A Message to the USD Research and Creative Community

Laura J. Jenski, Ph.D.
Vice President for Research (FY06-FY14)

Conventional wisdom in communication is that you tell your audience what you're going to tell them; you tell them; and then you tell them what you told them. In the interest of conserving space – and the reality that no one will read several pages of rambling essay – I am going to give the three iterations of my message here, once: Researchers must be able to communicate the importance of their research, and they must do research that is important.

For those of you willing to read a few hundred words more, please allow me to expound. It is no secret that federal funding for research is declining, and political support for research, especially basic research, is weak in many circles. While we might argue that the benefits of research and scholarship in general are obvious and should be embraced by all, the reality is that the significance of research and creative activities typically requires elaboration to be truly understood. It is the responsibility of university researchers to describe in easily understandable terms what they do and how it will create a better world and improve the human condition. At USD there are several ways in which researchers can get assistance with honing their message; contact the Office of Research and Sponsored Programs, Marketing & University Relations, your school or college, and your mentors. Make FY15 the year that your message is heard.

Here is the second part of the essay. The research must matter – it must attack the big problems, question paradigms, and attempt to move the unmovable. You are probably thinking, the funding agencies may say they want innovation but they only fund that which is guaranteed to succeed. Possibly. But convincing sponsors that big ideas will succeed is accomplished by presenting "big and transforming" in a series of small, realistic steps that are developed with painstaking thoroughness.

USD has many examples of transformative research and creativity that can and will change our world. Our goal for the future is to not only make work of this quality our standard operating procedure, but also to help others appreciate its value and become committed advocates for USD.

Status of Proposals and Awards in FY14

Over the past fiscal year, federal funding agencies continued to experience budget cuts, reallocations, and uncertain program continuation. As the agencies shrink the number and size of awards, it is inevitable that grantees experience parallel losses in support. This is particularly disturbing as we consider that the federal government is the principal source of support for basic research, and crumbling of this foundation of basic knowledge will have long-term ramifications for the vitality of innovation in our country. Historically, USD has received approximately 80% of its sponsorship from federal sources. In FY14, that number is 67%. For three consecutive years from its peak federal funding in FY11, USD has seen a diminution in federal funding. Although our faculty and staff submitted requests to federal, state, and other sponsors for more dollars than in FY13, the number and dollar amount of awards received were 3 awards and \$4,992,033 lower than last year. In part, fewer awards in FY14 emanated from a reduced number of proposals and lower dollar requests in FY13. However, the fiercely competitive nature of grantsmanship, particularly in some disciplines and at certain agencies, is a major factor.

Despite the vast challenges facing sponsored research, USD faculty have had significant successes in winning new grants, including prestigious federal awards, and sustaining their long-term research plans. These successes say to the entire campus community, don't give up or give in.

Please read the fine print below.

Figure 1: Awards (FY91-FY14)

The Office of Research and Sponsored Programs has done its best to record accurately every grant and contract received, every proposal submitted. But there are some irregularities we cannot control, such as when a sponsor awards funds for two or more budget years of a multi-year grant in the same university fiscal year. Some inputs into the data are subjective. For example, a faculty member may list his/her affiliation as either an academic department or a research center. The staff work hard to catch errors and work around the database limitations, but we cannot guarantee that the data are error free. This is particularly a concern with entries that are several years old, where the original paper records no longer exist and which were made prior to modifications of database fields. Inconsistencies of a few thousand dollars or less we have left in place, and apologize if this affects data of interest to you.

Institutional Comparisons

The National Science Foundation (NSF) tracks academic research activities by collecting self-reported research expenditures annually from institutions (<http://ncesdata.nsf.gov/herd/2012/>). These expenditures do not include funds for public service, instruction, or other activities outside of research, although expenditures may be from sources external or internal to the college or university. FY12 is the most recent year for which complete expenditure data on other institutions are available from NSF.

The peer institutions in Tables 13 and 14 are those approved by the South Dakota Board of Regents in June 2014. Parameters considered by the Board in this selection included revenues per FTE, enrollment number and level, nature and number of degrees including professional degrees, research expenditures, and certain student characteristics. Total enrollment shown in Table 13 is from Integrated Postsecondary Education Data System (IPEDS; <http://nces.ed.gov/ipeds/>).

Table 12: USD Research Expenditures (FY02-FY13), in *Thousands of Dollars**

FY	USD Research Expenditures in \$1,000 (NSF Survey)					
	Total	Federal	State/ Local	Industry	Institutional	Other
2002	\$8,368	\$5,830	\$174	\$0	\$681	\$1,683
2003	\$11,148	\$8,308	\$226	\$0	\$877	\$1,737
2004	\$15,523	\$12,849	\$126	\$0	\$1,422	\$1,126
2005	\$18,681	\$15,448	\$1,160	\$0	\$758	\$1,315
2006	\$22,613	\$17,308	\$2,445	\$0	\$1,169	\$1,691
2007	\$21,473	\$16,683	\$2,183	\$0	\$1,180	\$1,427
2008	\$22,742	\$17,569	\$2,411	\$0	\$1,304	\$1,458
2009	\$29,417	\$16,684	\$1,866	\$98	\$10,113	\$656
2010	\$30,616	\$16,467	\$1,061	\$364	\$12,343	\$381
2011	\$28,959	\$14,490	\$760	\$25	\$12,953	\$731
2012	\$31,982	\$14,088	\$1,302	\$172	\$14,945	\$1,475
2013	\$33,187	\$15,274	\$1,345	\$16	\$15,098	\$1,454

* How Institutional expenditures are calculated was changed in FY09, thereby accounting for most of the apparent increase in reported expenditures.

Table 13: Institutional Comparisons * (expenditures in thousands of dollars)

Institution	Characteristics		FY12 Research Expenditures (in thousands of dollars)					
	Fall 2012 Total Enrollment	Land Gt, Med Sch	Total	Federal	State/Local	Industry	Institutional	Other
